

**SYSTEM FOR AUTOMATICALLY REPORTING A
SYSTEM FAILURE IN A SERVER**

Abstract of the Disclosure

5 A system for reporting a failure condition in a server system which includes:
a controller which monitors the server system for system failures, and generates an
event signal and failure information if a system failure is detected; a system interface,
coupled to the controller, which receives the event signal; a central processing unit,
coupled to the system interface, wherein, upon receiving the event signal, the system
interface reports an occurrence of an event to the central processing unit; and a system
10 log which stores the failure information.
